- Graph quadratic equations and identify their vertex and axis of symmetry.
- Factor quadratics and apply the quadratic formula to find roots.
- Analyze the properties of parabolas, including maximum and minimum values.

Polynomials

Polynomials are expressions that consist of variables raised to whole number exponents. In Algebra 2, students learn to:

- Add, subtract, multiply, and divide polynomials.
- Factor polynomials using techniques such as grouping and the box method.
- Graph polynomial functions and determine their end behavior.

Rational Expressions and Equations

Rational expressions involve ratios of polynomials. Key skills include:

- Identifying and simplifying rational expressions.

- Solving rational equations and understanding asymptotic behavior.
- Applying rational functions to real-world problems.

Exponential and Logarithmic Functions

Exponential and logarithmic functions are vital in modeling growth and decay scenarios. In this section, students will:
