Introduction to CPM Algebra 2

The College Preparatory Mathematics (CPM) program is designed to enhance students' mathematical understanding through collaborative learning and problem-solving strategies. The Algebra 2 course is a critical stepping stone in a student's education, as it builds on foundational algebra concepts and introduces more complex topics such as functions, polynomials, and statistics. Understanding these concepts is crucial for success in higher-level mathematics and various STEM fields.

CPM Algebra 2 not only focuses on traditional algebra topics but also emphasizes the application of mathematics in real-world situations, encouraging students to think critically and work collaboratively. The program's unique structure promotes a deeper understanding of mathematics through exploration and inquiry.

Understanding the CPM Curriculum

The CPM curriculum is divided into several components, each designed to reinforce mathematical concepts and skills. Algebra 2 covers a wide range of topics that include:

- Linear equations and inequalities
- Quadratic functions
- Polynomials and rational expressions
- Exponential and logarithmic functions

- Statistics and probability
- Sequences and series
- Trigonometry

Each of these topics is introduced through problem-based learning, where students work in groups to solve complex problems. This approach not only enhances their understanding of the material but also builds essential collaboration skills.
